## Thuasne launches five back braces for back pain conditions

### **LombaStab range**

*Back braces with an easy-to-use and precise tightening system<sup>3</sup>!*

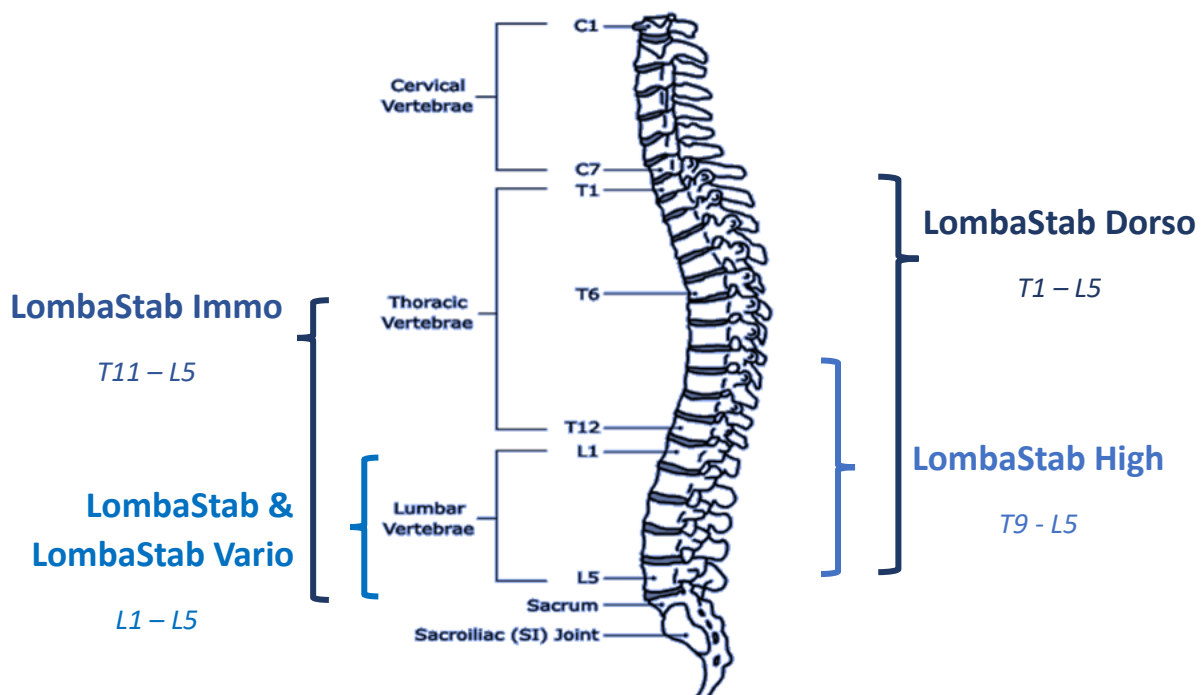

Back pain has been called "the disease of the century" by the World Health. The impacts of low back pain go beyond the significant economic cost and have important repercussions on the quality of life.

Through its commitments and more than 40 years of expertise, Thuasne launches a new range of back braces from lumbar to thoraco-lumbar orthosis to accompany the patients in treatment of their back conditions in their daily life.

This new range brings innovation thanks to the integrated lacing system technology and the comfort it brings to the patients.

### **A range for diverse lumbar conditions**

Following the success of the first LombaStab brace launch in 2016, Thuasne is manufacturing today four new braces to cover more spine conditions <sup>1</sup>

## High technicity for more comfort<sup>2</sup>

The new LombaStab products have been designed to answer each conditions<sup>1</sup> treatments challenge as well as the patients' everyday life needs. Easy and precise<sup>3</sup>, the tightening system combined with the specific elastic fabric allows to adapt the compression of the braces effortlessly depending on your need for an instant relief.

## A new elegant design

Thuasne has been focus in improving the past years the comfort of its solutions thought commitment in research & development.

The design of the braces and the specific Combitec fabric used permit a pleasant wear all day long while insuring the proper adaptability to different morphologies. Within the same objective, the patented hand loops permit a symmetrical fitting around your spine, thereby ensuring a high degree of patient's compliance.

## About Thuasne
